
America's abundance of oil and natural gas is providing a variety of high-tech, well-paying careers. [More than 30 refinery expansions worth \\$14 billion](#) are currently under development across the United States. In addition, approximately 243 U.S. chemical investment projects are planned – valued at \$146 billion. It's estimated that these projects can produce more than 485,000 direct jobs, more than 258,000 indirect jobs, and more than 442,000 jobs in communities around the investment areas. STEM knowledge is a key skillset in the refining and petrochemical sectors, and it's crucial that we prepare today's students to participate in tomorrow's workforce. With that in mind, AFPM was a proud sponsor of the sixth annual [Energy Day](#) in Houston on October 15. Presented by the [Consumer Energy Alliance](#) and [Consumer Energy Education Foundation](#), Energy Day 2016 drew a record-setting 22,000 K-12 students, families, and teachers. More than 50 interactive exhibits demonstrated the various forms of energy sources, science, technology, efficiency, and careers within the energy industry. AFPM's exhibit featured several hands-on demonstrations, including "petrochemical magic tricks" – students and families had the opportunity to make Shrinky Dinks, Silly Putty, and other experiments while exploring how petrochemicals are the building blocks for essential, every day products. Students also learned about the variety of well-paying career opportunities available within the energy industry. Events like Energy Day spotlight how refiners and petrochemical manufacturers create products for your life every day while investing in STEM initiatives and local communities.
