
WASHINGTON, D.C. — American Fuel & Petrochemical Manufacturers (**AFPM**) **President and CEO Chet Thompson** issued the following statement today on EPA’s release of a proposed rule to expand the 2026-2027 Renewable Fuel Standard (RFS) by tacking on additional obligations from 2025 via “reallocation:”

“The RFS is already the Trump administration’s most expensive regulation, by far — adding between 30-40 cents to the cost of every gallon of gasoline and diesel supplied to the U.S. market. EPA’s proposed ‘reallocation’ is unlawful and would only make fuel more expensive for U.S. consumers. The existing mandates are already the highest ever; enough is enough.”

Read more about the RFS and reallocation in the AFPM resources listed below:

About AFPM:

The American Fuel & Petrochemical Manufacturers (AFPM) is the leading trade association representing the makers of the fuels that keep us moving, the petrochemicals that are the essential building blocks for

modern life, and the midstream companies that get our feedstocks and products where they need to go. We make the products that make life better, safer and more sustainable — we make progress.
